

Here's a simple table with **5 dummy patient records** filled in, just like a data entry operator would prepare 🙋

Patient ID	Name	Age	Gender	Contact Number	Email	Address
P001	Rahul Sharma	32	Male	9876543210	rahul.sharma@email.com	12 MG Road, Mumbai
P002	Priya Mehta	28	Female	9123456780	priya.mehta@email.com	45 Park Street, Pune
P003	Arjun Verma	40	Male	9988776655	arjun.verma@email.com	78 Green Valley, Delhi
P004	Sneha Kapoor	35	Female	9765432109	sneha.kapoor@email.com	23 Lotus Lane, Bangalore
P005	Rohan Desai	50	Male	9345678901	rohan.desai@email.com	56 Sunrise Ave, Ahmedabad

✔ Each record has **standard fields**: ID, Name, Age, Gender, Contact Number, Email, and Address.

Would you like me to also create a **matching dummy dataset for Doctors** so you can test appointments and bills end-to-end?
